Software Quality Assurance

I am a detail-oriented Software Quality Assurance Engineer and proactive Business Analyst with expertise in Agile and Scrum methodologies. I specialize in manual testing, bug identification, and project management, ensuring high-quality, bug-free software delivery. Proficient in Jira, Excel, and Google Sheets, I excel in solving complex problems, fostering collaboration, and driving successful project outcomes.

Project

Ultra Snaped: Team & Task Management Web Application

Contribution: Performed end-to-end manual testing on core modules including Authentication, User & Organization Management, Task & Project Management, Time Tracking, and Reporting. Designed and executed test cases, identified critical and minor defects, and reported bugs with proper documentation. Conducted **load testing using Apache JMeter** to evaluate system performance under concurrent user load. Ensured functionality, usability, and performance across key workflows such as signup/login, task creation, time tracking, and report generation.

Open Mart-Ecommerce Project

Contribution: Tested core modules, including authentication, product management, cart, checkout, and payment system. Performed functional testing on order processing, user account, and inventory features; identified bugs and ensured smooth user experience across the platform.
